SUMMARY

Full-stack developer and Computer Science student at Kumasi Technical University who takes products from idea to live deployment. Has built and shipped a prompt-engineering SaaS with paying users, a hostel booking platform with split payments, a student marketplace with real-time chat, and a job-tracking system that runs a print shop's payments, receipts and customer SMS. Completed the Full Stack Development Internship at Codveda Technologies (July to August 2026).

EDUCATION

Computer Science • Kumasi Technical University, Ghana
In progress

EXPERIENCE

Full Stack Development Intern • Codveda Technologies
July 2026 to August 2026 • Internship completed

- Worked on front-end and back-end development, database integration and web application development across three levels of increasing difficulty.
- Built **CampusCart**, a student marketplace, from a REST API and plain-JavaScript front end to a React app with JWT authentication, real-time chat (Socket.io) and a GraphQL API, deployed on Railway with MySQL.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, PHP, Java, Python, Kotlin, HTML, CSS, SQL

Front end: React, Next.js, Angular, Tailwind CSS, Jetpack Compose (native Android), responsive design

Back end: Node.js, Express, Laravel, REST and GraphQL APIs, Socket.io, authentication (JWT, sessions), role-based access control

Databases: MySQL, PostgreSQL, MongoDB Atlas, Prisma, Sequelize, Dexie.js (offline-first)

Integrations: Paystack, Mobile Money flows, Arkesel SMS, Brevo email, Cloudinary, Claude API

Tools and platforms: Git, GitHub, Railway, Vercel, Netlify, WSL2 / Linux, NetBeans

PROJECTS

PromptForge: Prompt Engineering SaaS • *promptforgeus.com*
Stack: Next.js 16, TypeScript, Prisma, PostgreSQL, Claude API, Paystack

- Interviews users about their goal, then generates a structured, scored prompt through a two-stage self-critique pipeline.
- Live with paying users on a GHS 60 per month plan, with authentication and a dashboard for saved and explored prompts.

Kellylodge: Student Hostel Booking Platform • *kellylodge-production.up.railway.app*
Stack: Node.js, Express, MySQL, Socket.io, Paystack, Arkesel SMS, Brevo

- Per-room-type inventory and instant booking backed by row-level locking, which prevents double bookings.
- Paystack split payouts pay hostel owners automatically as rooms are booked; owner and student dashboards, SMS and email notifications, validated image uploads.
- Hardened with bcrypt password hashing, CSRF and XSS prevention and rate limiting. Deployed on Railway.

CampusCart: Student Marketplace • *brilliant-tenderness-production-b963.up.railway.app*
Stack: React, Vite, Node.js, Express, Sequelize, MySQL, Socket.io, GraphQL, Cloudinary

- Buy, sell and trade listings with multi-photo uploads, category filters and search, plus a real-time buyer and seller chat widget.
- Matching REST and GraphQL APIs enforcing the same authentication and ownership rules; JWT sessions with inactivity auto-logout.
- Security hardening: rate limiting on auth routes, locked-down CORS, password strength rules, and a proxy-related rate-limiter fix found during a security audit.

ARIZONA GBC: Print Shop Management System *(live, private system)*

Stack: Next.js 15, Prisma, MySQL, Arkesel SMS, Railway

- Built for a print shop in Ghana: staff log jobs, record cash or MoMo payments, and issue receipts and invoices with QR verification.
- Customers receive SMS updates and can track their job online; includes owner and staff roles, reports, stock and price list with profit tracking.
- Payments are recorded inside database transactions so a double tap can never record the same payment twice.

CA Analytics System *(completed, not deployed)*

Stack: Node.js, Express, EJS, MySQL

- Role-based system (admin, lecturer, student) for tracking weighted continuous-assessment scores per course. University mini project.
- Risk engine calculates the CA percentage so far, the exam score a student needs to pass, and the score trend, then assigns a risk tier so struggling students are flagged early.
- Includes lecturer interventions and an audit trail of score changes; bcrypt password hashing and session security.

KellyPOS: Offline-First Point of Sale *(in pilot)*

Stack: Next.js 15, Prisma, Dexie.js, Tailwind CSS

- Point of sale for small retail shops that keeps working offline and syncs when the connection returns.
- Cash and MoMo checkout, role-based access, shift reconciliation and audit logging.

CERTIFICATION & STRENGTHS

- **Internship Completion Certificate**, Full Stack Development Internship, Codveda Technologies, July to August 2026 (Intern ID: CV/A1/81082). Recognised for dedication, consistency and a proactive approach to learning.
- Self-driven learner who builds real products alongside coursework.
- Strong problem-solving skills and hands-on experience across the full development stack.
